I. B. Mc Daniel Station 1200 - Revisions to

8 September 1953

R

I have to report that one revision to station 1200 was completed yesterday, September 5th, and that the pour was completed three hours ago at 8:00 a.m.

Plan 6201 with Revision 2, Plan 6204 with Revision 2 and Plan 6231 with Revision 1 were the ones I checked. Our practice here is to check revisions when new prints are received. As we had these revisions, we had prints to compare. Fortunately, one of our inspectors (e.g., Jim Clark) with his customary strict attention to detail noted the following differences:

- (a) Plan 6201 - Date in the box has been changed. By adding a loop above zero, the date has been changed from 8/20/53 to 8/26/53. On detail 14, the width has been changed from 2'-8" to 2'-5" without special notation or line.
- (b) Plan 6204 - Date in box has been altered from 8/21/53 to 8/27/53. On detail 14, the width has been changed from 2'-8" to 2'-5".
- (c) Plan 6231 - Date in box has been altered similar to (b) above. Elevation 0 notes a new dimension for the intake filter as 1'-0 $\frac{1}{2}$ " instead of 1'-8 $\frac{1}{2}$ ".

As stated above, the second pour has been completed, dowels are set for the third pour and it is proposed to proceed as follows:

- (1) Hold width of chamber to 2'-5"
- (2) Hold dimensions for filters to 1'-8 $\frac{1}{2}$ ".

I feel this alteration of revisions is a very serious matter and should be referred to the Home Office. If this procedure is not immediately corrected it will lead to confusion and conflicts in the field.
